

# SCC2500A

Crawler Crane

250 Tons Lifting Capacity

Quality Changes the World

Max. lifting moment:  $230 \times 6 = 1380 \text{t}\cdot\text{m}$

Max. boom length: 85m

Max. fixed jib combination: 70m+31m

Max. luffing jib combination: 55m+58m

The parameters and diagrams in the brochure is only for reference, which is subject to further update in real machine.

QUALITY CHANGES THE WORLD

## Main Characteristics

- Page 04 Product Specification
- Page 07 Safety Device

> 03

## Product Specification

### Engine

- Model: QSL8.9-C325, Chinese Cummins, Diesel engine(QSL9-C325 from Cummins US is optional);
- Type: 4-stroke, water-cooled, vertical in-line 6 cylinders, direct injection, turbo-charger, intercooler, complied with European Off-way Tier III Emission Standard and Chinese Off-way Tier III Emission Standard;
- Displacement: 8.9L;
- Rated power: 242kW/2100rpm;
- Operation power: 234kW/1800rpm;
- Max. Torque: 1385N·m/1500rpm;
- Starter: 24V-6.0kW;
- Radiator: fin type aluminum plate core;
- Air cleaner: Dry type system with main filter element, safety element and resistance indicator;
- Throttle: Grip type hand throttle, electrically-controlled;
- Fuel filter: Replaceable paper element;
- Batteries: Two 12V×180Ah capacity batteries, connected in series;
- Fuel tank capacity: 400L.

### Electrical Control System

- Self-developed SYIC-II integrated control system is adopted with higher integration, precise operation and reliable quality;
- Control system consists of power system, engine system, main control system, LMI system, auxiliary system and safety monitoring system. CAN BUS is used for data communication between controller, monitor and the engine;
- Monitor: the working parameters and status are shown on the monitor, such as the engine speed, fuel volume, engine oil pressure, servo pressure, wind speed, engine working hours, lifting conditions and boom angle.

### Hydraulic System

- Main pumps: open variable displacement piston pumps of large displacement are adopted to provide oil supply for main actuators of main machine;
- Gear pump: dual gear pump for swing, radiator and control circuit;
- Control: main pump adopts electrically-controlled positive flow control; winch motor adopts limitless adjustable piston motor of variable displacement. The operating components are two cross hydraulic handle, one dual travel pedal control valve to control various actuators proportionally;
- Way of cooling: heat exchanger, fan core and multi-stage cooling;
- Filter: large flow, high precision filter, with bypass valve and transmitter, which can remind the user to replace the filter element in time;
- Max. pressure of system: 32 Mpa;
- Main/aux. load hoist, boom hoist, swing system and travel system: 32Mpa;
- Control system: 5 MPa;
- Hydraulic Tank Capacity:460L.

### Main and Auxiliary Load Hoist Mechanism

- Main and aux. hoist winches are driven separately by motor via gearbox. Operating winch handle can control the winch to rotate to two directions, which are lifting and lowering of hook. Excellent inching function is equipped on the machine;
- Drums with fold-line grooves can ensure the wire rope reeved in order in multilayers;
- Free fall for main/aux. load hoist is offered as optional.

Main Hoisting Mechanism	Drum diameter	630mm
	Rope speed (5th layer)	0-145m/min
	Diameter of wire rope	26mm
	Main load hoist wire rope length	430m
	Rated single line pull	13.5t
Auxiliary Hoisting Mechanism	Drum diameter	630mm
	Rope speed (5th layer)	0-130m/min
	Diameter of wire rope	26mm
	Auxiliary load hoist wire rope length	310m
	Rated single line pull	13.5t

## Product Specification

### Boom Hoist Mechanism

- Boom hoist winch is driven directly by motor via gearbox. Operating winch handle can control the winch to rotate to two directions, which are lifting and lowering of boom;
- Drums with fold-line grooves can ensure the wire rope reeved in order in multilayers.

Boom hoist mechanism	Drum diameter	440mm
	Rope speed (5th layer)	0~67m/min
	Diameter of wire rope	22mm
	Boom hoist wire rope length	250m
Jib hoist mechanism	Drum diameter	500mm
	Rope speed (5th layer)	0~67m/min
	Diameter of wire rope	22mm
	Jib hoist wire rope length	190m

### Swing Mechanism

- Swing brake adopts wet, spring loaded, normally-closed brake, and braking through spring force;
- Swing system, equipped with integrated swing buffer valve, has free slipping function. It is featured in steady starting and control, and excellent inching function. Unique swing buffer design and steadier brake;
- Swing drive: external engaged swing drive with 360° swing range, and the max. swing speed is 1.5r/min. The max. drive pressure can reach 32MPa;
- Swing ring: three-row roller bearing.

### Cab and Control

- Novel operator's cab with fashionable profile, nice interior and large window glass, which can tilt up by 20° to provide panorama view. There are low and high-beam lights, back-view mirror, heater and A/C, radio and other functions. The layout of seat, handles, control buttons are designed with ergonomic principles to make operation more comfortable;
- Cab layout: Integrated 10.4-inch touch screen, programmable smart switches, and man-machine interaction interface are more perfect;
- Armrest box: on the left and right armrest box are control handles, electrical switches, emergent stop and ignition switch. The armrest box can be adjusted along with the seat;
- Seat: multi-way and multi-level floating adjustable seat with unload switch;
- A/C: cool and heat air; optimized air channels and vents;
- Multiple cameras can present on the monitor at the same time to realize backing video, real-time monitoring of wire rope on each winch, conditions behind the counterweight and surrounding the machine.

### Counterweight

- The stacking mode of counterweight tray and blocks is used for easy assembly, disassembly and transportation;
- Rear counterweight: total 86t, 6.35t x 6, 9.15t x 4, counterweight tray 11.3t;
- Carbody counterweight: total 25t, 12.5t x 2.

### Upperworks

- High-strength steel weld framework, with no torsion or deformation. The parts are laid out in the way that is easier for maintenance and service.

## Product Specification

### Lowerworks

- Independent travel driving units are adopted for each side of the crawler, to realize straight walking and turning driven by travel motor through gearbox and drive wheel.

### Crawler Tightening

- The jack is used to push the guide wheel and insert the shim to adjust crawler tension.

### Track Pad

- High strength alloy cast steel track pad ensure long service life;
- They are 1100mm wide with a quantity of 59 pads x 2.

### Operating Equipment

- All chords are high-strength steel tubes, and the boom/jib top sheaves are made of high-strength anti-wearing Nylon material protecting wire rope. The hooks are installed with milled welded steel sheave.

#### Boom

- Lattice structure. The chord adopts high-strength structural tube and each section is connected through pins;
- Basic boom: 8m boom base + 8m boom top;
- Boom insert: 3m×1, 6m×3, 12m × 4;
- Boom length: 16m~85m.

#### Fixed Jib

- Lattice structure. The chord adopts high-strength structural tube and each section is connected through pins;
- Basic jib: 5m jib base +3m insert +5m jib top;
- Jib insert: 6m×3;
- Fixed jib: 13m~31m;
- Longest boom + jib: 70m +31m.

#### Luffing jib

- Lattice structure. The chord adopts high-strength structural tube and each section is connected through pins;
- Basic jib: 6.5m jib base +9m insert +6.5m jib top;
- Jib insert: 3mx1,6mx1,9mx3;
- Longest boom + jib: 55m+58m.

#### Extension Jib

- The welding structure is connected with main boom through hinge pin, and used for aux. hook operation;
- Length of extension boom: 1.5m.

#### Hook Block

- 250t hook, 11 pulleys
- 150t hook, 7 pulleys;
- 80t hook, 3 pulleys;
- 35t hook, 1 pulley;
- 13.5t ball hook.

## Safety Device

### Assembly/Work Mode Control Switch

- Under the assembly mode, over-hoist limit switch, crane boom limit device and load moment limiter do not work, so as to facilitate the installation of crane;
- All safety limit devices work in the work mode.

### Emergency Stop

- In emergent situation, this button is pressed down to cut off the power supply of whole machine and all actions stop.

### Load Moment Limiter (LML)

- It is an independent computerized safety control system. LML can automatically detect the load weight, work radius and boom angle, and present on the display the rated load, actual load, work radius and boom angle. In normal operation, the LML can make a judgment and cut off automatically if the crane moves towards dangerous direction. It can also perform as a black box to record the lifting information;
- It is composed of monitor, angle sensor and force sensor and other parts.

### Over-hoist Limit Switch of Main/Auxiliary Hooks

- Over-hoist protection device comprises of limit switch and weight on boom top, which prevents the hook lifting up too much;
- When the hook lifts up to the limit height, the limit switch activates, buzzer on the left control panel sends alarm, failure indicator light starts to flash, and the hook hoisting action is cut off automatically, cut off automatically.

### Over-release Limit Switch of Main/Auxiliary Hooks

- It is comprised of activator in the drum and proximity switch to prevent over release of wire rope. When the rope is paid out close to the last three wraps, the limit switch acts, and the system sends alarm through buzzer and show the alarm on the instrument panel, automatically cutting off the winch action.

### Function Lock Lever

- If the function lock level is not in work position, all the other handles won't work, which prevents any mis-operation caused by accidental collision.

### Boom Hoist Drum Lock

- Pawl lock is used on boom hoist winch, which needs to unlock by switch before operation, in order to prevent mis-operation of handles and ensure safety during nonwork time.

### Swing Lock Device

- Swing Lock can lock the machine at four positions, front and back, left and right.

### Boom Limit Device

- When the boom elevation angle reaches the max. set limit, the buzzer sounds and boom action cut off. This protection is two-stage control ensured by both LML system and travel switch;
- Back-stop Device;
- Its major components are nesting tubes and spring, in order to buffer the boom backlash and prevent further tipping back;
- Boom Angle Indicator;
- Pendulum angle indicator is fixed on the side of boom base close to the cab, so as to provide convenience to the operator.

### Hook Latch

- The hook is provided with a baffle to prevent wire rope from falling off.

## Safety Device

### **Lightning Protection Device**

- It is offered as an optional feature, which includes the grounding device that can effectively protect the electric system elements and workers from lightning.

### **Tri-color Load Indicator**

- The load indication light has three colors, green, yellow and red, and the real time load status is presented on the display. When the actual load is smaller than 90% of rated load, the green light is on;
- When the actual load is larger than 90% and smaller than 100%, the yellow light is on, the alarm light flashes and sends out intermittent sirens;
- When the actual load reaches 100% of rated load, the red light is on, the alarm light flashes and sends out continuous sirens;
- When the actual load reaches 102% of rated load, the system will automatically cut off the crane operation in dangerous trend.

### **Audio-visual Alarm**

- When the engine is working, the light flashes; when the machine is traveling or swinging, it sends out sirens.

### **Swing Indicator Light**

- The swing indicator light flashes during traveling or swing.

### **Illuminating Light**

- The machine is equipped with the low beam light and high beam light at the front of the cab, illumination light at cab, and other night lights, boom lights to improve the visibility during construction.

### **Rearview Mirror**

- Separately set on the left front of the cab and on the handrail at the front of right sheet metal, so as to monitor the rear part of machine.

### **Pharos**

- Pharos is mounted on the top of boom/jib to indicate the height.

### **Anemometer**

- It is mounted on the top of boom/jib, and displayed on the monitor in the cab.

### **Electronic Level Indicator**

- It displays the tipping angle of crane on the monitor in real time, protecting the machine from dangerous situation;
- Put down the function lock lever on the left side of cab seat or if the operator leaves the seat, all control levers will be deactivated to prevent any mis-operation due to accidental collision.

### **Engine Power Limit Load Adjustment and Stalling Protection**

- The controller monitors the engine power to prevent engine getting stuck and stalling.

### **Engine Status Monitoring**

- The engine status will be presented, such as engine coolant temperature, fuel volume, total work hours, engine oil pressure, engine speed, battery charging, voltage.

## Major Performance Specifications

Major Performance & Specifications of SCC2500A			
Performance Indicators		Unit	Parameter
Boom configuration	Maximum rated lifting capacity	t	250
	Maximum rated lifting moment	t·m	1380(=230x6)
	Boom length	m	16~85
Fixed jib configuration	Maximum rated lifting capacity	t	36.3
	Jib length	m	13~31
	Longest main boom + fixed jib	m	70+31
LJ configuration	Maximum rated lifting capacity	t	66.8
	Jib length	m	22~58
	Longest boom + luffing jib	m	55+58
Operation speed	Rope speed of main/aux. load hoist (5th layer)	m/min	0-130
	Rope speed of boom/jib hoist (5th layer)	m/min	0-67
	Slewing speed	rpm	0-1.5
	Travelling speed	km/h	0-1.0
Engine	Output power	kW	242
	Rated speed	rpm	2100
Transport parameter	Max. transport weight of basic machine (with boom base)	t	44.9
	Maximum transport dimension of basic machine (L x W x H)	mm	17100x3000x3250
Other parameters	Average ground bearing pressure	MPa	0.119
	Gradeability	%	30

Unit: mm

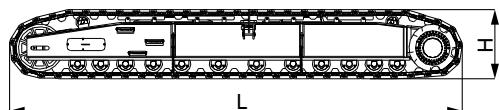

**Outline Dimension**

## Transportation Dimensions

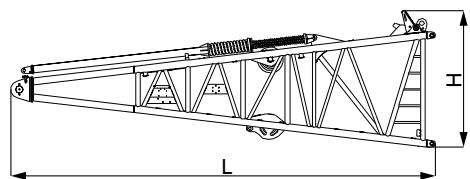

### Basic Machine × 1

Length(L)	17.1m
Width(W)	3m
Height(H)	3.25m
Weight	44.9t

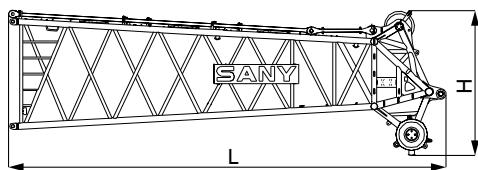

### Crawler × 2

Length(L)	9.1m
Width(W)	1.58m
Height(H)	1.34m
Weight	21.2t

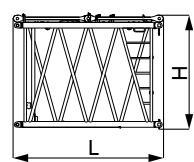

### Boom Base × 1

Length(L)	8.21m
Width(W)	2.36m
Height(H)	2.51m
Weight	4.5t

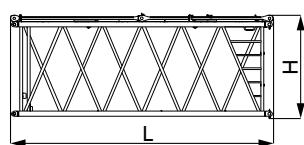

### Boom Top × 1

Length(L)	8.78m
Width(W)	2.23m
Height(H)	2.92m
Weight	3.6t

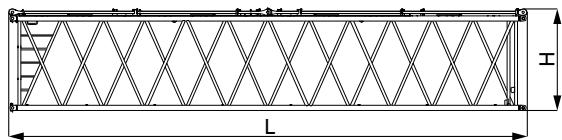

### 3m Boom insert × 1

Length(L)	3.18m
Width(W)	2.23m
Height(H)	2.39m
Weight	0.82t

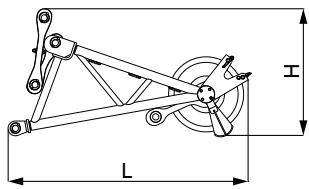

### 6m Boom insert × 3

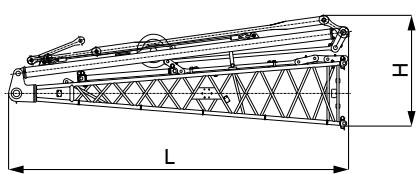

Length(L)	6.18m

## H Working Radius

Unit: t

**H Load Chart**

## Note:

- 1.The rated load in the load chart is calculated complying with EN 13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
- 4.The load value is calculated when the object is hung freely, without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
- 5.All rated values are calculated when the machine is parking on firm and level ground with less than 1% gradient.

**SCC2500A crawler crane – H load chart 1/2**

Boom length/ radius (m)	Boom Length 16~85m				Rear Counterweight 86t			Carbody Counterweight 25t				Boom length/ radius (m)

**HCa Load Chart**

Note:

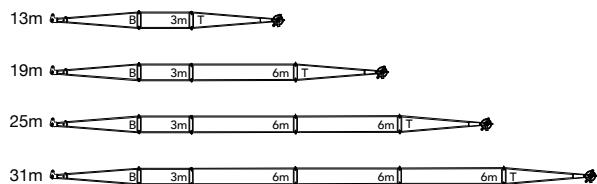

- 1.The rated load in the load chart is calculated complying with EN 13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
- 4.The load value is calculated when the object is hung freely, without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
- 5.All rated values are calculated when the machine is parking on firm and level ground with less than 1% gradient.
- 6.The rated values in the table shall deduct the converted weight of main hook.
- 7.The main hook must lift to the top and shall not attach load when using the auxiliary hook for lifting.

**LJ Configuration**

Note: ★ means recommended boom combination.

**LJ Working Radius**

Unit: t

**LJ Load Chart**

## Note:

- 1.The rated load in the load chart is calculated complying with EN 13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
- 4.The load value is calculated when the object is hung freely, without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
- 5.All rated values are calculated when the machine is parking on firm and level ground with less than 1% gradient.

**LJ Load Chart**

## Note:

- 1.The rated load in the load chart is calculated complying with EN 13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
- 4.The load value is calculated when the object is hung freely, without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
- 5.All rated values are calculated when the machine is parking on firm and level ground with less than 1% gradient.

**LJ Load Chart**

## Note:

- 1.The rated load in the load chart is calculated complying with EN 13000;
- 2.The working radius is the horizontal distance from the load center to the swing center;
- 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
- 4.The load value is calculated when the object is hung freely, without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgement and decreasing the load and lowering speed.
- 5.All rated values are calculated when the machine is parking on firm and level ground with less than 1% gradient.
